

We are pleased to announce that **Steynes** will be participating in the upcoming **#JASIS 2021** exhibition at Makuhari Messe in Chiba Prefecture.

Steynes is distributing products by **Agico**, the world leading instrument company of geoscience and **Looper Systems** is a dealing company with its own unique MLAs (magnetic loop antennas) for amateur radio stations. The both of companies are operating in Czech Republic.

During the 3-day event, **Steynes** will be showcasing **Looper Systems** magnetic loop antenna called **MLA-S (light QRP)** on our desk. Its new compact antenna for the QRP operation (up to 10W) is handy for outdoor or even fix in the balcony on your flat.

Join us November 8th to 10th at our booth, organized by Czech Embassy, for some interesting discussions!

MLA-S (light QRP) is a demo at our booth!

Brochures of **Agico** instrument are available at our booth.
